Additional Items Needed

- **Glue:** 3 (10.5 oz tubes)
- **Tools Needed:** Level, Caulking Gun

Instructions:

1. Prepare a stable, level project area by following these steps:
   - Excavate area approximately 5" below grade
   - Excavate approximately 6" larger than the actual project dimensions
   - Fill 4" with suitable base material, compact and level in all directions

If installing on an existing patio or suitable base you may proceed to install the project after ensuring the base is level.

2. We recommend not gluing the project until it has been assembled completely, including the WaterWall kit. Then, once everything fits, downstack a few layers and glue just a few of the upper layers. For maintenance, do not ever glue the middle wall cap on the last layer. This will give you access to adjust and maintain the weir.

3. These instructions are designed for the Aquascape WaterWall Spillway Kit (item code 58080). An internet search will come up with several sources to purchase from.

4. Follow the manufacturer's installation instructions except we recommend waiting to glue the pvc tubing until after everything has been installed and "dry fitted" together. We further recommend waiting until the metal weir has been placed to determine the appropriate length of tubing to cut between the weir and the tank.
