Mutual Materials[®]

Mortar Colors

Mortar color makes the difference

DRY-BLOCK[®] Inside

A perfect mix of integral water repellent
 and mortar

Mutual Materials DRY-BLOCK[®] Inside is a
 factory blend of Mutual Materials Design Mix[™]
 Type S Professional-Grade Mortar and
 Grace Construction Products DRY-BLOCK[®]
 Mortar Admixture.

Protecting structures from adverse effects of
 water is a key performance factor in single-
 wythe and cavity wall construction. Water
 penetration into CMU and mortar can damage
 interior finishes, and lead to efflorescence and staining. By combining DRY-
 BLOCK[®] Mortar Admixture and Mutual Materials professional grade mortar
 at our factory, we're providing you an extra level of assurance that what
 you've designed will maintain its integrity and the quality that you expect—
 at the point of construction.

Mortar Colors

From the lightest whites and creams, to the darkest reds and browns, the right mortar color not only enhances even the smallest project, but it gives you the options needed to set your project apart from all of the others. And, whether you're blending or using creative finishing techniques, Mutual Materials® mortar options are limited only by your imagination.
